

CDI Seals

CDI Seals uses a combination of Technology, Innovation, and Reliability to manufacture high performance devices for the diverse applications found in the Industrial, Scientific, Consumer or Energy sectors.

CDI's Technology driven manufacturing processes provide the versatility necessary to ensure the best possible sealing solution for our customers' unique requirements.

The CDI engineers utilize Innovation in design and materials to overcome the challenges presented by strict emission standards, aggressive media, and high temperature/pressure applications.

CDI has a reputation for Reliability throughout industry by providing consistently superior sealing products for over 30 years. CDI has the experience required to manufacture reliable seals and components for all forms of industry.

With manufacturing operations in Houston, Texas, Hamburg, Germany & Hampton, UK that are supported by partners or service centers located in North America, South America, Europe, Asia and the Pacific Rim CDI is a company of Global capabilities.

Fenner Advanced Sealing Technologies

Working closely with our customers using the most advanced materials and technology to supply sealing solutions for the most demanding performance-critical applications.

FAST (Fenner Advanced Sealing Technologies) manufactures and distributes specialist seals, and provides advanced sealing solutions for process and fluid power applications throughout Europe, North America and the Asia Pacific region.

Applications include: mining, automation, earth-moving and construction machinery, petrochemical, oil, gas and downstream activities, as well as the pharmaceutical, medical, semiconductor and aerospace sectors.

Technology

For over three decades, the CDI Seals 'Technology Factor' has grown to become the keystone of our success in the fluid sealing and processing industry.

CDI Seals has an ongoing commitment to identify new technologies that are relevant to cost-effective seal design and manufacture. CDI Seals then implements these elements with the goal of providing our customers with progressive solutions to their sealing requirements.

CDI's pursuit of new technologies is not limited to design criteria. It is also directed at manufacturing process improvements that enable CDI to produce high-quality seals in an economically efficient manner.

Innovation

Technology alone is not sufficient to consistently furnish sealing solutions to a broad range of industries with diverse requirements.

Innovative thinking with respect to materials, designs and applications is absolutely necessary to cope with the ever more difficult sealing parameters that face our customers.

New capabilities initiated by the CDI Engineering and Sales staff become the basis for innovations being developed specifically for our customers applications. In the area of materials innovation CDI Seals partners with major polymer suppliers around the

globe to create seals from 'nano-tech' elastomers and high performance thermoplastic for all types of industry.

Innovation in design at CDI Seals is driven by our skilled Engineering staff and supported by CAD/CAM technology. Innovation becomes the norm when proven design equations are computerized for repeatability.

Reliability

At CDI Seals, Reliability is the result of uniting Technology and Innovation with controlled manufacturing processes run by highly skilled individuals.

Pursuant to our ISO certification, CDI monitors and evaluates all aspects of manufacturing ensuring a consistently reliable product for our customers. Training in safety, production techniques and quality procedures is ongoing for our employees who have a genuine concern for the reliability of the seals they produce.

QA involvement throughout the entire manufacturing process, from contract review to final certification assures the reliability of the documentation we provide our customer as well as that of the seals we manufacture.

CDI reliability is maintained with field support and training at customer locations around the world.

Global capability

Due to the global nature of our business, CDI and F.A.S.T. have assembled an infrastructure to support our customers around the world.

Production manufacturing is located in Texas, Germany, and the U.K. Partners or service centers are located in North and South America, Europe, Asia, and Australia. Seals can be manufactured to any international size standard.

Our customers enjoy on-site technical assistance supported by our utilization of the most current forms of electronic communication.

The secret of our success in advanced sealing solutions.

The quality you demand and support where you need it.
